

HECKER SHANNON

PRODUCT DESIGNER | AI-NATIVE PRODUCTS

Product designer with 15 years on complex, high-stakes products, now at the frontier of AI-native design. I build AI products as well as design them: uoai.ai turns prompts into production UIs, so I work on helping people trust, steer and act on what a non-deterministic system produces. Because I build with AI agents daily, I design with model constraints in mind, not just what looks good on screen. Nine years at J.P. Morgan, ending as VP Product Design on Fusion; now leading design across FX at Barclays.

SKILLS

- AI-Native & Agentic Product Design
- Conversational & Generative UX
- Designing for AI Trust, Control & Transparency
- Interaction & Visual Design
- Systems Thinking (AI & Model Constraints)
- Rapid Prototyping (incl. with code)
- AI-Assisted Workflow (Claude, Cursor, Codex)
- Design Systems & Scalable Patterns
- Design Leadership & Direction-Setting

EDUCATION

London Metropolitan University
MA in Digital Media, 2015–2016

Ling Tung University, Taiwan
BA in Digital Media Arts & Management, 2008–2010

EXPERIENCE

2026 – Present

uoai.ai Designer + Builder

An AI-native product I designed and built solo: it turns prompts into production-ready UIs, so the system takes real autonomous action and my job is the control, transparency and feedback that let people trust and steer what it produces. Because I built it on Claude and Next.js, I design with model constraints in mind, not just what looks good on screen. In private alpha, spanning five design systems.

2026 – Present

Winking Star Designer + Builder

A consumer family habit tracker I designed and shipped solo on iPhone, iPad and web, built in React Native and Expo. End to end, from interaction design to a live App Store release.

2025 – Present

Barclays, London Senior Product Designer

FX and MarketsOne

- Lead design end to end across FX and MarketsOne, from discovery through to production, shaping complex, interaction-heavy interfaces for expert users in a high-stakes environment and partnering closely with product and engineering.
- Own the design system, a coherent set of tokens, components and patterns that keeps UI consistent across web and native and raises quality across the platform.
- Mentor designers, run design critique, and set the craft standard, raising UI quality across the team.

2016 – 2025

J.P. Morgan, London Vice President, Product Design

Fusion Platform Suite [↗](#)

- Fusion Analytics Dashboard: Designed complex B2B data platform for institutional clients, translating technical financial data into clear, actionable interfaces for expert users making high-stakes decisions at scale.
- Fusion Universal Design System: Built the tokenised component library and patterns that many product teams built their own journeys on, turning a fragmented ecosystem into one consistent, scalable platform.
- Fusion Data Solution: Owned design across ambiguous, technically complex product areas, partnering with engineering leadership to shape feasible solutions within real architectural constraints.

Security Service products [↗](#)

- ETF Instruct: Redesigned high-volume trading workflows with APAC leads, reducing friction and improving order accuracy.
- Corporate Action Manager: Simplified compliance-sensitive workflows in a regulated setting, improving usability for a large operations team.

DXD Microsite and Marketing Materials

- Designed and launched an internal UX microsite for front-office and middle-office stakeholders, raising the profile of the UX discipline across the business.

DXD UI Toolkit and Brand Guidelines

- Evolved an internal component library into a scalable design system serving multiple cross-asset teams, reducing design overhead and accelerating delivery.
- Led stakeholder workshops to align UI patterns across asset classes and maintain brand integrity.

JPMM Execute Trading platform [↗](#)

- JPMM FX, RaaS and Algo Center: Modernised legacy trading tools, improving workflow speed and accuracy for FX traders.
- Bento Design Library: Established shared UI foundations enabling consistent, scalable cross-asset development.
